Third-Party Resources Used

1. FontAwesome

FontAwesome is a popular icon toolkit used to add scalable vector icons to the project. It provides a wide range of icons that can be easily customized with CSS. In this project, FontAwesome was used to add social media icons and other UI elements.

2. SCSS

SCSS (Sassy CSS) is a CSS preprocessor that extends the capabilities of CSS with variables, nested rules, and mixins. It helps in writing more maintainable and reusable styles. In this project, SCSS was used to style the components with advanced features and better organization.

3. Browser Development Tools

Browser development tools, such as Chrome DevTools, were used to inspect and retrieve some of the original assets. These tools provide a suite of features for debugging, profiling, and optimizing web applications. They were instrumental in ensuring the visual accuracy and performance of the project.

4. GitHub Copilot

GitHub Copilot is an AI-powered code completion tool that assists developers by suggesting code snippets and entire functions. It was used in this project to streamline the workflow, generate boilerplate code, and provide coding assistance, thereby improving productivity and code quality.
